a Each model is consistent with itself

Krippendorff's α across its 3 runs (darker = more consistent)

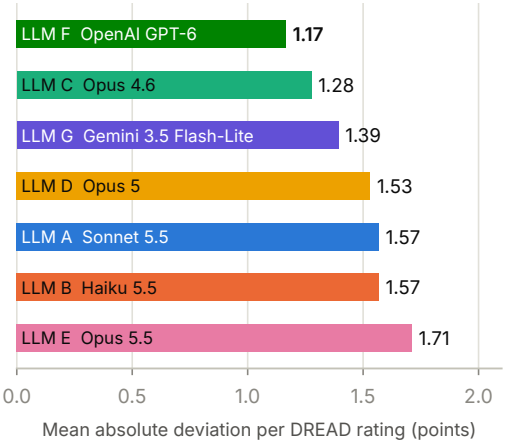
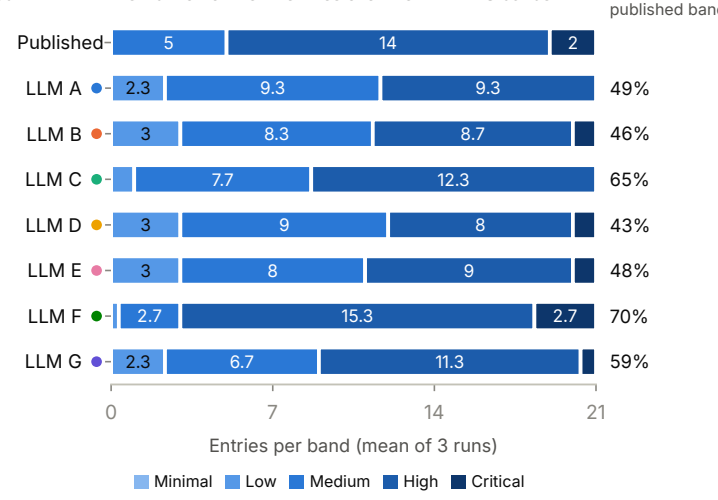
c GPT-6 is closest; none is close

Deviation from the published ratings, five DREAD ratings, sorted



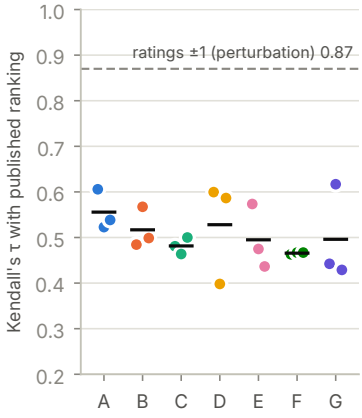
d Most models shift bands down; GPT-6 stays closer

Distribution of the 21 entries over the DREAD-S bands



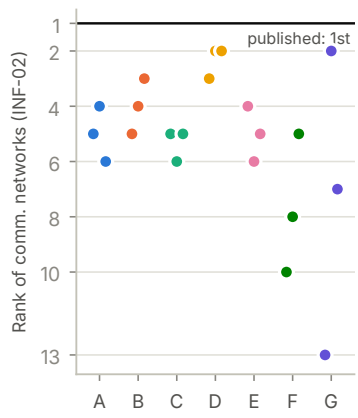
e Ranking only partly kept

τ per run, bar = mean



f First place never reproduced

never 1st in any of 21 runs



g Safety impact transfers well
